

Rubric — Track 1: Beginner (Kanban with Comments & @Mentions)

Total: **100 points**.

Grade against the artifacts committed to the repo. Where an artifact is missing, award zero for that row; do not infer effort from other artifacts.

Category	Weight	Excellent (full)	Adequate (partial)	Missing (0)
CLAUDE.md quality (manual + /init)	15	Both manual and /init versions present at both user and project levels; substantive project-specific content; short reflection meaningfully compares the two versions.	Files present but generic; reflection thin or mostly restates what each file contains.	One or both files missing, or a copy-paste of /init output with no edits.
Design brief	10	Wireframes cover all core flows (board, card detail, notifications); component list matches what was actually built; user flows are step-by-step.	Wireframes exist but incomplete, or component list drifts from the implementation.	No design brief.
Plan doc	10	7+ numbered steps, dependencies noted, time estimates on each step, at least one risk flagged explicitly.	Steps present but shallow; no dependencies or estimates.	No plan, or a flat bullet list with no structure.
Architecture doc	10	Data model diagram + API table + state flow + two tradeoffs, all coherent with the code.	Missing one of the four components.	Missing two or more components.
Feature correctness	20	All acceptance criteria pass on demo; drag/drop works and persists; mentions link and generate notifications.	Most criteria pass; small gaps (e.g., reorder doesn't persist, mention regex misses edge cases).	Core flows broken or not runnable.

Category	Weight	Excellent (full)	Adequate (partial)	Missing (0)
TDD evidence	15	Git log shows failing-test commits before implementation for all three TDD targets (mention parsing, notification creation, authorization).	Some TDD, some code-first commits.	No failing-test commits, or tests written after the fact in a single commit.
HTML workflow report	15	All six required sections present, screenshots included, clean inline CSS, self-contained.	Sections thin or missing screenshots, or relies on external assets.	Report missing or plain text only.
Reflection / polish	5	Specific, honest reflection that names a concrete surprise and a concrete change; code passes the project's linter.	Reflection is generic ("I learned a lot").	No reflection.

Grading Notes for Instructor

- Award partial credit within a row. A row is not all-or-nothing — a "mostly excellent" entry can score, for example, 12/15.
- **Bonus 5 pts** for any student who successfully uses two different subagents in the plan or architecture phases (e.g., planning subagent for the plan, general-purpose subagent for architecture, or a plugin subagent for either).
- **Penalty 10 pts** if the `/init` output is submitted unchanged as the CLAUDE.md file. This indicates no engagement with the tool and defeats the purpose of the exercise.
- Feature correctness should be graded from a live demo, not from the report. If the student's environment does not run, note that in the feedback and grade the artifacts only.
- TDD evidence should be graded from the git log directly. Ask the student to run `git log --oneline` in the demo.
